No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Sequence 5, 7 Sequence 5, 8 Sequence 16, 8 Sequence 10, 8 Sequence 10, 8 Sequence 10, 8 Sequence 11, 18 Sequence 11, 18 Sequence 31, 18 Sequen
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Sequence

Sequence 116.6468743

GENERAL INFORMATION:

APPLICANT: Thomas L. Romick (Inventor)

TITLE OF INVENTION:

TITLE OF INVENTION: PCR TECHNIQUES FOR DETECTING MICROBIAL

TITLE OF INVENTION: PCR TECHNIQUES FOR DETECTING MICROBIAL

TITLE OF INVENTION: PCR TECHNIQUES FOR DETECTING MICROBIAL

TITLE OF INVENTION: PCR 1890-05-17

FILE REFERENCE: HUNN A-ND VIRAL

CURRENT APPLICATION NUMBER: US/09/313,221A

CURRENT APPLICATION NUMBER: US 60/086,025

PRIOR PILING DATE: 1998-05-18

NUMBER OF SEQ ID NOS: 145

SOFTWARE: FastSEQ for Windows Version 4.0

LENGTH: 44
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 GENERAL INFORMATION:
APPLICANT: Racaniello, Vincent
APPLICANT: Tatem, Joanne M.
APPLICANT: Weeks-Levy, Carolyn L.
TITLE OF INVENTION: METHODS FOR PRODUCING RNA VIRUSES FROM
TITLE OF INVENTION: CDNA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      DB 3; Length 44; 2.7;

GENERAL INFORMATION:
GENERAL INFORMATION:
APPLICANT: VENTER, J. Craig et al.
TITLE OF INVENTION: POLYMORPHISMS IN KNOWN GENES ASSOCIATED
TITLE OF INVENTION: WITH HUMAN DISEASE, METHODS OF DETECTION AND USES THEREOF
FILE REFERENCE: CLOO1307
CURRENT FILING DATE: 2000-04-14
FRIOR APPLICATION NUMBER: 60/241,755
FRIOR APPLICATION NUMBER: 60/231,768
FRIOR APPLICATION NUMBER: 60/231,498
FRIOR APPLICATION NUMBER: 60/231,498
FRIOR FILING DATE: 2000-10-03
FRIOR APPLICATION NUMBER: 60/231,498
FRIOR FILING DATE: 2000-09-08
NUMBER OF SEQ ID NOS: 207012
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Sequence 124, Application US/08311731A
Patent No. 658326
GENERAL INFORMATION:
APPLICANT: SMITH, DOUGLAS
APPLICANT: MAO, JEN-I
TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES
TITLE OF INVENTION: RELATING TO MYCOBACTERIUM TUBERCULOSIS AND LAPRAE FOR TITLE OF INVENTION: DIAGNOSTICS AND THERAPEUTICS
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Score 14.2; DB 3; Length 23108;

Patent No. 6812339

GENERAL INFORMATION:
PATENT NO. 6812339

GENERAL INFORMATION:
TITLE OF INVENTION: POLYMORPHISMS IN KNOWN GENES ASSOCIATED
TITLE OF INVENTION: WITH HUMAN DISEASE, METHODS OF DETECTION AND USES THEREOF;
FILE REPERENCE: CLOOK 1307

CURRENT APPLICATION NUMBER: US/09/949,016

CURRENT PILING DATE: 2000-04-14

PRIOR PILING DATE: 2000-10-20

PRIOR FILING DATE: 2000-10-20

PRIOR FILING DATE: 2000-10-03

PRIOR FILING DATE: 2000-10-03

PRIOR FILING DATE: 2000-09-08

NUMBER OF SEQ ID NOS: 207012

Sequence 25349, Application US/09949016

Patent No. 6812339

GENERAL INFORMATION:

APPLICANT: VENTER, J Craig et al.

TITLE OF INVENTION: POLYMORPHISMS IN KNOWN GENES ASSOCIATED

TITLE OF INVENTION: WITH HUMAN DISEASE, METHODS OF DETECTION AND USES THEREOF;

TITLE OF INVENTION: WITH HUMAN DISEASE, METHODS OF DETECTION AND USES THEREOF;

CURRENT FILING DATE: 2000-04-14

PRIOR APPLICATION NUMBER: 60/241,755

PRIOR PELING DATE: 2000-10-03

PRIOR FILING DATE: 2000-10-03

PRIOR FILING DATE: 2000-10-03

The invention provides a method and a kit for detecting and differentiating an enterovirus type 71 (EV71)in a sample. The method involves contacting nucleic acids in the sample with a pair of primers to form an amplification product; contacting the amplification product with at least one synthetic nucleoride sequence fixed on a solid substrate and detecting hybridisation. The present sequence is a probe used to detect and differentiate enterovirus type 71 (EV71) in a sample.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   New kit comprising a pair of oligonucleotide primers for nucleic acid amplification, useful in detecting and differentiating an enterovirus
                                                                                                                                                                                                                                                                                                                                                   pl probe used to detect enterovirus type 71 (EV71) in a sample.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      100.0%; Score 19; DB 13; Length 27; 100.0%; Pred.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ö
                                                                                                                                                                                            The present invention relates to a method of producing cDNA from one or more biological units, comprising preparing an admixture of the biological units, comprising preparing an admixture of the biological unit and the catabolic enzyme. This involves preparing cDNA from one or more biological units by obtaining at least one biological unit and the catabolic enzyme, preparing an admixture of at a temperature where the catabolic enzyme is active and with reverse transcriptase under conditions to allow reverse transcription. The method is useful for detecting a specific sequence of RNA in a crude cell lysate. The kit is useful for producing cDNA in a biological unit. The present sequence is a PCR primer/probe used in the exemplification of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The invention describes the application of nucleotide primer to detecting enterovirus. The detection method and the reagent kit are disclosed. This sequence represents an enterovirus detection method associated primer
                                                                          Producing cDNA from one or more biological units, useful for detecting a specific sequence of RNA in a cell or tissue sample, comprises preparing an admixture of the biological unit and the catabolic enzyme.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Process, primer and probe for detecting and discriminating enterovirus.

The present invention relates to a method for monitoring microbiological quality of an aqueous environmental medium that potentially contains many different microorganisms. A reference set of at least three microorganisms is chosen that, separately or collectively. There microbiological quality. The test medium is treated, then any microorganisms, or their fragments, in the treated medium is contacted with a set of at least three probes for specific identification and multiple determination of selected microorganisms. This determination represents the level of microbiological quality. The method is useful for identifying and quantifying microorganisms in water and provides results that are used to control water purification/production processes. The present sequence is a probe which was used to illustrate the invention. (Updated on 29-AUG-2003 to standardise OS field)
                                                                                                                                                                                                                                                                                   Monitoring microbiological quality of water, useful particularly for controlling water purification, uses oligonucleotide probes to detect at least three representative microbes.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Monitoring microbiological quality of water, useful particularly for controlling water purification, uses oligonucleotide probes to detect at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           100.0%; Score 19; DB 6; Length 30; 100.0%; Pred.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The present invention relates to a method for monitoring microbiological quality of an aqueous environmental medium that potentially contains many different microorganisms. A reference set of at least three microorganisms is chosen that, separately or collectively, represent microorganisms is chosen that, separately or collectively, represent microorganisms, or their fragments, in the treated medium is contacted with a set of at least three probes for specific identification and multiple determination of selected microorganisms. This determination represents the level of microbiological quality. The method is useful for identifying and quantifying microorganisms in water and provides results that are used to control water purification/production processes. The present sequence is a probe which was used to illustrate the invention. (Updated on 29-MUG-2003 to standardise OS field)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Monitoring microbiological quality of water, useful particularly for controlling water purification, uses oligonucleotide probes to detect at least three representative microbes.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Vernet G;

                                                                                                                                                                                                                                                                                                                                                                                                                                        ઠ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                         요
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ö
                                                                   The present invention relates to a method for monitoring microbiological quality of an aqueous environmental medium that potentially contains many different microorganisms. A reference set of at least three microorganisms is chosen that, separately or collectively, represent microorganisms is chosen that, separately or collectively, represent microorganisms, or their fragments, in the treated medium is contacted with a set of at least three probes for specific identification and multiple determination of selected microorganisms. This determination represents the level of microbiological quality. The method is useful for identifiying and quantifying microorganisms in water and provides results that are used to control water purification/production processes. The present sequence is a probe which was used to illustrate the invention. (Updated on 29-AUG-2003 to standardise OS field)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           This sequence represents a primer used in the method of the invention. The method is for classifying an unclassified live poliovirus type 2 vaccine (attenuated by a G to A substitution at nucleotide position 481) as having an acceptable or unacceptable level of neurovirulence, and comprises, prior to vaccine administration: (a) selectively amplifying a region (I) of the poliovirus genome containing nucleotide position 481 using selectively mismatched primers to introduce a site-specific mutation to create a restriction endonuclease (RE) site which includes
                                                                                                                                                                                                                                                                                                                                                                                                                       Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Determining acceptability of poliovirus vaccines - based on mutation reversion(s) and comparison to World Health Organisation standard.

nucleotide position 481, (b) digesting an amount of (I) with a RE that specifically cleaves the amplified sequences in revertant viruses which contain an A to G reversion at nucleotide position 481; (c) digesting an amount of (I) with a RE that specifically cleaves the amplified sequences in non-revertant viruses which contain an A at nucleotide position 481; (d) quantifying the percentage of revertant viruses in the unclassified vaccine to the percentage of revertant viruses in the unclassified vaccine to the percentage of revertant viruses in an accepted reference vaccine which can pass the monkey neurovirulence test utilised by the World Health Organisation, an unclassified vaccine with a
                                                                                                                                                                                                                                                                                                                                                                                                          higher percentage of A to G revertant viruses than in the reference vaccine being classified as unacceptable and an unclassified vaccine with an equal or lower percentage of A to G revertant viruses than in the reference vaccine classified as acceptable. The test can also be used to identify cells that are suitable for the culture of attenuated
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            selected amplification or detection reaction. Also described: (1) a kit (K1) comprising (1), and one or more container that contains (1); and (2) detecting (M1) an enterovirus target sequence, involving: (a) amplifying the target sequence using first amplification primer having a sequence consisting essentially of target binding sequence of any one of AEB56764 to AEB56771 and optionally a sequence required for selected amplification
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The invention relates to an oligonuclectide (I) consisting of: (a) the target binding sequence of an oligonuclectide chosen from any one of the 10 sequence of AEB56762 to AEB56771; and (b) a sequence required for selected amplification or detection reaction. Also described: (1) a kit

The invention relates to an oligonucleotide (I) consisting of: (a) the target binding sequence of an oligonucleotide chosen from any one of the consequence of ARBS6752 to ARBS6771; and (b) a sequence required for selected amplification or detection. Also described: (1) a kit (XI) comprising (I), and one or more container that contains (I); and (2) detecting (MI) an enterovirus target sequence, involving: (a) amplifying the target sequence using first amplification primer having a sequence consisting essentially of target binding sequence of any one of ARBS6764 consisting essentially of target binding sequence of any one of ARBS6764 consisting absentially a sequence required for selected amplification reaction, and (b) detecting the amplified target sequence. (I) (MI) and (XI) are useful for detecting enterovirus target sequence. (I) specifically and selectively recognizes the enterovirus genome. (I) specifically and rapidly detects fewer than 500 copies of enteroviral genome and allows detection of broad range of enterovirus serotypes. The present sequence represents a viral 5' untranslated polynocleotide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Novel oligonucleotide comprising sequences for binding and amplifying or detecting target, useful for detecting enterovirus nucleic acids.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     sequence given in the exemplification of the present invention

                                                                                                                                                                                                                                                                                                                   ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The invention relates to an oligonucleotide (I) consisting of: (a) the target binding sequence of an oligonucleotide chosen from any one of the 10 sequence of AEBS67762 to AEBS6771; and (b) a sequence required for selected amplification or detection reaction. Also described: (I) a kit (KI) comprising (I), and one or more container that contains (I); and (2) detecting (MI) an enterovirus target sequence, involving: (a) amplifying the target sequence using first amplification primer having a sequence consisting essentially of target binding sequence of any one of AEBS6764 to AEBS6771 and optionally a sequence required for selected amplification reaction; and (b) detecting the amplified target sequence. (I), (MI) and (KI) are useful for detecting thereovirus target sequence. (I), (MI) and specifically and selectively recognizes the enterovirus genome. (I)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Novel oligonucleotide comprising sequences for binding and amplifying or detecting target, useful for detecting enterovirus nucleic acids.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           sensitively and rapidly detects fewer than 500 copies of enteroviral genome and allows detection of broad range of enterovirus serotypes. present sequence represents a viral 5' untranslated polynucleotide
reaction; and (b) detecting the amplified target sequence. (I), (M1) (X1) are useful for detecting enterovirus target sequences. (I) sepecifically and selectively recognizes the enterovirus genome. (I) sensitively and rapidly detects fewer than 500 copies of enteroviral genome and allows detection of broad range of enterovirus serotypes. Present sequence represents a viral 5' untranabated polyuncleotide equence given in the exemplification of the present invention.

This sequence represents domains V-VI of the internal ribosomal entry size (IRES) of PVI (prr), a recombinant, non-pathogenic oncolytic policyirus that carries the IRES of Policyirus type 1 Mahoney where the terminal loop of regions of domain V and domain VI are substituted with the corresponding fragments of human rhinovirus type 2 (HRV2). PVI (prr) was characterized by a loss of neuropathogenicity, demonstrated by its reduced ability to propagate within cells of neuronal origin and failure to cause neurological disease in Cd155 tymice. Oncolytic potential was chample of novel recombinant policyiruses (I) of the invention in which the IRES of wild-type policyirus is exchanged with the IRES of another region is exchanged with that of Sabin policyirus. (I) are useful for region is exchanged with that of Sabin policyirus. (I) are useful for treathing malignant tumors such as glioblastom multiforme.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           hepatocellular, bronchial
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Chimeric recombinant poliovirus useful for treating malignant tumors comprises internal ribosomal entry site derived from picornaviruses.

The invention relates to an oligonucleotide (1) consisting of: (a) the target binding sequence of an oligonucleotide chosen from any one of the sequence of ABBS6772 to ABBS6771; and (b) a sequence required for selected amplification or detection reaction. Also described: (1) and (2) selected amplification or detection reaction. Also described: (1); and (2) detecting (M1) an enterovirus target sequence, involving: (a) amplifying the target sequence using first amplification primer having a sequence consisting essentially of target binding sequence of any one of ABBS6764 to ABBS6771 and optionally a sequence required for selected amplification reaction; and (b) detecting the amplified target sequence. (1), (M1) and (M1) are useful for detecting enterovirus target sequence. (1), specifically and selectively recognizes the enterovirus genome. (1) specifically and selectively recognizes the enterovirus genome. (1) sensitively and rapidly detects fewer than 500 copies of enteroviral control of proad range of enterovirus sericipes. The
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Novel oligonucleotide comprising sequences for binding and amplifying or detecting target, useful for detecting enterovirus nucleic acids.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             untranslated polynucleotide
                                                                                                                                                                                                                           Human coxsackievirus B1 5' untranslated polynucleotide sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         present sequence represents a viral 5' untranslated polynucleot sequence given in the exemplification of the present invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Score 19; DB 14; Length 180; Pred. ```
The invention relates to an oligomucleotide (I) consisting of: (a) the target binding sequence of an oligomucleotide chosen from any one of the target binding sequence of ABBS6771; and (b) a sequence required for 10 sequence amplification or detection reaction. Also described: (1) a kit (KI) comprising (I), and one or more container that contains (I); and (2) detecting (MI) an enterovirus target sequence, involving: (a) amplifying the target sequence using first amplification primer having a sequence consisting essentially of target binding sequence of any one of ABBS6764 to ABBS6771 and optionally a sequence required for selected amplification reaction; and (b) detecting the amplified target sequence. (I), (MI) and (KI) are useful for detecting enterovirus target sequence. (I) specifically and selectively recognizes the enterovirus genome. (I) sensitively and rapidly detects fewer than 500 copies of enteroviral senome and allows detection of broad range of enterovirus serotypes. The present sequence represents a viral 5 untranslated polymucleotide sequence given in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                          Novel oligonucleotide comprising sequences for binding and amplifying or detecting target, useful for detecting enterovirus nucleic acids.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       100.0%; Score 19; DB 14; Length 198; 100.0%; Pred.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The invention relates to an oligonucleotide (I) consisting of: (a) the target binding sequence of an oligonucleotide chosen from any one of the 10 sequence of ABB56762 to ABB56771; and (b) a sequence required for selected amplification or detection. Also described: (I) a kit (KI) comprising (I), and one or more container that contains (I); and (2) detecting (MI) an enterovirus target sequence, involving: (a) amplifying the target sequence using first amplification primer having a sequence consisting essentially of target binding sequence of any one of ABB56764 to ABB56771 and optionally a sequence required for selected amplification reaction; and (b) detecting the amplified target sequence. (I), (MI) and (KI) are useful for detecting the amplified target sequences. (I) specifically and selectively recognizes the enterovirus genome. (I) specifically and rapidly detects fewer than 500 copies of enteroviral genome and allows detection of broad range of enterovirus serotypes. The present sequence represents a viral 5, untranslated polynucleotide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Novel oligonucleotide comprising sequences for binding and amplifying or detecting target, useful for detecting enterovirus nucleic acids.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              sequence given in the exemplification of the present invention

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          셤
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The invention relates to an oligonucleotide (1) consisting of: (a) the target binding sequence of an oligonucleotide chosen from any one of the consisting dequence of ABBS6712 to ABBS6712 and (b) a sequence required for selected amplification or detection reaction. Also described: (1) a kit (K1) comprising (1), and one or more container that contains (1); and (2) detecting (M1) an enterovirus target sequence, involving: (a) amplifying the target sequence using first amplification primer having a sequence consisting essentially of target binding sequence of any one of ABBS674 to ABBS671 and optionally a sequence required for selected amplification reaction; and (b) detecting the amplified target sequence. (1), (M1) and (K1) are useful for detecting the amplified target sequence. (1) specifically and selectively recognizes the enterovirus genome. (1) specifically and rapidly detects fewer than 500 copies of enteroviral genome and allows detection of broad range of enterovirus serotypes. The present sequence represents a viral 5' untranslated polynucleotide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ô
                                                                                                                                   Novel oligonucleotide comprising sequences for binding and amplifying or detecting target, useful for detecting enterovirus nucleic acids.

The invention relates to an oligonucleotide (1) consisting of: (a) the target binding sequence of an oligonucleotide chosen from any one of the 10 sequence of ABBS6771; and (b) a sequence required for selected amplification or detection reaction. Also described: (1) a kit (K1) comprising (1), and one or more container that contains (1); and (2) detecting (M1) an enterovirus target sequence, involving: (a) amplifying the target sequence using first amplification primer having a sequence consisting essentially of target binding sequence of any one of ABBS676 to ABBS6771 and optionally a sequence required for selected amplification reaction; and (b) detecting the amplified target sequence. (1) (M1) and (M1) are useful for detecting enterovirus target sequences. (1) specifically and selectively recognizes the enterovirus genome. (1) specifically and rapidly detects fewer than 500 copies of enteroviral genome and allows detection of broad range of enterovirus serotypes. The present sequence represents a viral 5 untranslated polymucleotide sequence given in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The invention relates to an oligonucleotide (I) consisting of: (a) the target binding sequence of an oligonucleotide chosen from any one of the 10 sequence of ARBS6772 to ARBS6771; and (b) a sequence required for selected amplification or detection reaction. Also described: (I) a kit (K1) comprising (I), and one or more container that contains (I); and (2)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Novel oligonucleotide comprising sequences for binding and amplifying or detecting target, useful for detecting enterovirus nucleic acids.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Gapa
